EXPERIENCE

- ❖ **Cloud Analogy Soft. Pvt. Ltd**
Location - Noida
Role - Full Stack Technical Lead
Duration - 01/2018 - Present

Working as Senior Full Stack Developer & Technical Lead with a successful track record in deploying projects across diverse platforms such as AWS, Azure, GCP, and Firebase. Proficient in a spectrum of technologies, including JavaScript, Node.js, React.js, Nest.js, Next.js, MongoDB, SQL Server, GraphQL, TypeScript, Redux Toolkit, and Unit Testing. Proven leadership abilities demonstrated in guiding a team of full stack developers, ensuring project success, and delivering high-quality IT services. Skilled at navigating intricate technical landscapes and employing a diverse skill set for efficient and effective development processes.

KEY PROJECTS

- ❖ **Spotter Tech – Data Analysis Web Application**

A data analysis web application for oil and gas-based companies. Additionally, I used Google map Api to locate the oil wells on the map and high charts to show the real time data charts on the dashboard - Reactjs, NestJs, Typescript, Apollo GraphQL, Postgresql, react-google-maps.

Roles and Responsibilities: Project setup, Team management, Optimizing frontend and backend code.

❖ **Stream Febrikan – Online Webinar Platform**

Application for the participants of webinars where they can join meetings with links including presentation, screen sharing, polls, and chats. Platform also allows users to create events and streams and share them using RTMP on Wousa – React.js, Firebase Functions, Dolby.io.

Roles and Responsibilities: Team Leader, mentoring team, Team management, Optimizing the app.

❖ **Supportpay - Expense Manager**

Support-pay is a web application which is used to manage child support, alimony & all your children's expenses – medical, education, child care or any other shared expenses – in one simple application. I have worked on this project as a senior full stack developer and used a graphql backend integrated with postgresql. I have worked on integration of checkbook.io to create and send the e-checks.

Roles and Responsibilities: Team Leader, mentoring team, Team management, Optimizing the app.

❖ **CloudMeetIn - Online Meeting Platform**

The cloudMeetIn app is basically used for scheduling the meeting with multiple platforms like (Goto Meeting, Zoom).You have to register in the cloud meeting app with a valid email address for using its features.CloudMeetIn wants access of your calendar to send them and receive the meeting invitation in your integrated calendar. The user can configure during registration his public URL, timezone, calendar, time availability, user role for scheduling the meeting. The user can see their scheduled meeting on the dashboard page. A user can filter their scheduled meeting with different parameters and can create his team and group also.

Roles and Responsibilities: Team Leader, mentoring team, Team management, Optimizing the app.
